Avian influenza—known informally as avian flu or bird flu is a variety of influenza caused by viruses adapted to birds. The type with the greatest risk is highly pathogenic avian influenza (HPAI). Bird flu is similar to swine flu, dog flu, horse flu and human flu as an illness caused by strains of influenza viruses that have adapted to a specific host. Out of the three types of influenza ...

The first classification of birds was developed by Francis Willughby and John Ray in their 1676 volume *Ornithologiae*. Carl Linnaeus modified that work in 1758 to devise the taxonomic classification system currently in use. Birds are categorised as the biological class *Aves* in Linnaean taxonomy. Phylogenetic taxonomy places *Aves* in the dinosaur clade *Theropoda*.

Density is defined as the mass of an object divided by its volume. This statement can be written as an equation:  $D = m / V$ . An object that has a lot of mass in a small volume will have a large density, and an object with little mass in a large volume will have a small density.

An overview of bioaerosol cycling and effects in the Earth system is given in Fig. 2. Some organisms actively emit PBA particles, such as wet-discharged fungal spores, which are emitted with the help of osmotic pressure or surface tension effects, while the passive emission of other PBA particles, like thallus fragments and dry-discharged fungal spores, is mostly wind-driven (Elbert et al., 2007).
