High-Risk Pregnancy Conditions, Diagnosis, and Treatment ...

Several factors can make a pregnancy high risk, including existing health conditions, the mother's age, lifestyle, and health issues that happen before or during pregnancy. This page provides some possible factors that could create a high-risk pregnancy situation. This list is not meant to be all-inclusive, and each pregnancy is different, so the specific risks for one pregnancy may not be ...

What are some factors that make a pregnancy high risk ...

Background Preterm preeclampsia is an important cause of maternal and perinatal death and complications. It is uncertain whether the intake of low-dose aspirin during pregnancy reduces the risk of ...

Aspirin versus Placebo in Pregnancies at High Risk for ...

Two international expert task forces addressed cerebral palsy (CP) causation in 1999 1 and 2003. 2 In 2014, the American Congress of Obstetricians and Gynecologists and the American Academy of Pediatrics, with many international consultants, updated these reports but chose to focus on neonatal encephalopathy and a variety of neurological outcomes rather than discuss CP causation specifically ...

Adjuvant chemotherapy given during and after radiotherapy for high-risk endometrial cancer did not improve 5-year overall survival, although it did increase failure-free survival. Women with high-risk endometrial cancer should be individually counselled about this combined treatment. Continued follow-up is needed to evaluate long-term survival.

* viral load is the most important biological factor influencing risk of onward transmission, for all modes of transmission. Other uncommon modes of transmission have been described in a small number of cases, including pre-mastication of food for infants and from breastfeeding infants to women (14, 15). These are not considered major drivers of HIV transmission from a public health perspective.

Second-Trimester Abortion. In the United States, more than one half of pregnancies are unintended, with 3 in 10 women having an abortion by age 45 years (). In 2008, 1.2 million abortions occurred in the United States, of which 6.2% took place between 13 weeks of gestation and 15 weeks of gestation, and 4.0% took place at 16 weeks of gestation or later (2, 3).

Second-Trimester Abortion - ACOG

Postpartum Pain Management. ABSTRACT: Pain and fatigue are the most common problems

reported by women in the early postpartum period. Pain can interfere with a woman's ability to care for herself and her infant. Untreated pain is associated with a risk of greater opioid use, postpartum depression, and development of persistent pain.
