

Clinical Perinatal Biochemical Monitoring

Clinical Perinatal Biochemical Monitoring

1. Introduction. Chronic histiocytic intervillitis (CHI) of the placenta is a rare and poorly understood condition characterized by maternal mononuclear cell infiltration of the intervillous space [1,2]. Although only identified in 4.4% of first-trimester miscarriages with normal karyotype [3,4] and 6/10,000 in second- and third-trimester placentas [], the condition is of interest to ...

Management. Children and adolescents with DKA should be managed in a unit that has: Access to laboratory services for frequent and timely evaluation of biochemical variables.

Clinical Practice Guidelines : Diabetic Ketoacidosis

Clinical death is the medical term for cessation of blood circulation and breathing, the two necessary criteria to sustain human and many other organisms' lives. It occurs when the heart stops beating, a condition called cardiac arrest. The term is also sometimes used in resuscitation research. Stopped blood circulation has historically proven irreversible in most cases. Prior to the invention ...

Major depressive disorder (MDD), also known simply as depression, is a mental disorder characterized by at least two weeks of low mood that is present across most situations. It is often accompanied by low self-esteem, loss of interest in normally enjoyable activities, low energy, and pain without a clear cause. People may also occasionally have false beliefs or see or hear things that others ...
