Geological Evidence Of The Age

An ice age is a long period of reduction in the temperature of the Earth's surface and atmosphere, resulting in the presence or expansion of continental and polar ice sheets and alpine glaciers. Earth is currently in the Quaternary glaciation, known in popular terminology as the Ice Age. Individual pulses of cold climate are termed "glacial periods" (or, alternatively, "glacials", "glaciations ...

Undoubtedly, the concept of a young earth poses a stumbling block to many Christians. Many do not find it hard to reject evolution, particularly with the fossil record showing distinct categories of plants and animals with no hint of any basic category changing into another. God surely created, they say, "but couldn't He have done it over millions and billions of years?"

Geology describes the structure of the Earth on and beneath its surface, and the processes that have shaped that structure. It also provides tools to determine the relative and absolute ages of rocks found in a given location, and also to describe the histories of those rocks. By combining these tools, geologists are able to chronicle the geological history of the Earth as a whole, and also to ...
